Golden, CO 80401

CE Summer
2004

BIO
VISION Technologies, LLC
VETERINARY
ENDOSCOPY

This three day seminar will expose you to the latest in surgical technique and equipment. This includes the theory and practice to help you develop new minimally invasive surgical skills. Plus, get your hands on cutting-edge equipment from BioVision Technologies Veterinary Endoscopy.

By the end of each course, participants will be able to identify and operate the equipment necessary for minimally invasive surgery. They will also gain a solid foundational knowledge of minimally invasive surgery and it's applications.

Summer Sessions 1 & 2: Introductory Small Animal Laparoscopy

This short course will provide a practical overview of canine laparoscopy and thoracoscopy. The small animal practitioner will gain valuable knowledge and technique for use in laparoscopic and thoracoscopic surgical procedures. This course is intended for those who have minimal or no experience with laparoscopy and thoracoscopy.
